

Differentiating Surfaces

5. Permeable Parking

- Slows speed of cars pulling into and out of parking
- Captures storm water and reduces flooding
- Makes a different sound than asphalt alerting drivers if they veer off of the roadway

6. Red Asphalt

- Delineates neighborhood greenways as special zones
- Makes cars crossing greenways more aware that they are approaching a cycle route
- Helps cyclists identify the street as a major route that connects to other routes and destinations.
